Detailed Action

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 8/22/06 has been entered.

Claims 7-45 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 8/23/05.

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-6 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Applicant, in the amendment filed 12/30/05, added the limitation of a recombinant baculovirus that infects **permissive host cells** without lyzing the **permissive host**

Art Unit: 1636

cells. In the latest amendment, filed 6/22/06, applicant further amended the claims to recite that the recombinant baculovirus clones that infect **permissive host cells** without lyzing the **permissive host cells** are A1, A2, A3, C4, 1028, 1044, 1053, 1071, 1081, 1085, 1091, 1094, 3058, 3074, PN8, PN9, PN19, PN23, PN24, or PN121. The claims therefore read on the recited recombinant baculoviruses being able to infect **any permissive host cell** without lyzing said permissive host cell. The application, as filed however, does not provide support for this limitation. It appears that the only cells infected by the claimed recombinant clones were Sf21 cells and the only cells analyzed for cell lysis were Sf21 cells. Therefore the scope of the claimed invention, as amended, is not supported by the instant application as filed. Also, the term "**permissive** (emphasis added) host cells" is not disclosed in the application as filed. This is a NEW MATTER rejection.

Claims 1-6 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

A deposit of the 20 clones disclosed and claimed by applicant is required. Said clones are required to practice the claimed invention and are not disclosed in the prior art or are commercially available. The skilled artisan would not be able to reliably reproduce the claimed clones as said clones were generated by random mutagenesis using BrdU and applicant has not characterized said clones at the molecular level so as

Art Unit: 1636

to identify the specific mutations in the genomes of the baculoviral clones. A deposit of said clones is therefore required and applicants must comply with the requirements of 37 CFR 1.801-1.809.

No Claims are allowed.
